

SUMMER INTERNSHIP PROJECT

Sustainability & CSR in International Trade

A case study of CLB EXIM PVT. LTD.

Prepared by | Pritam Saha

MBA • Bengal Institute of Business Studies

Vidyasagar University • 2024–2026

Executive Overview

02

What the study examines, what the evidence indicates, and why it matters

The business context

Global trade increasingly links profitability with environmental responsibility, ethical labour and stakeholder trust.

The study lens

CLB EXIM is assessed across ethical sourcing, environmental practices, employee welfare, governance and stakeholder engagement.

The strategic question

How can a growing mica exporter scale international trade while maintaining responsible and traceable operations?

Core takeaway

The report presents CLB EXIM as a company with a proactive sustainability orientation—supported by ethical sourcing, environmental initiatives, stakeholder engagement and international CSR frameworks—while highlighting traceability, technology, measurement and cost pressures as the main scaling challenges.

CLB EXIM & the Mica Industry

Company profile, product focus and market context

CLB EXIM at a glance

Founded in 2018 in Kolkata by Mr. G. Bagaria, CLB EXIM operates in mica manufacturing and exports. The company focuses on specialized, quality-oriented products rather than competing purely on volume.

- Mica blocks, thins and condenser films
- Mica powder, flakes and fabricated mica
- Micanite and precision insulation components
- Value-added products: washers, cut mica, transistor insulation parts

Industry snapshot

Global mica market: > USD 650M in 2024; projected ~4% CAGR to 2032.

\$21M+

India mica exports • 2024

8

CLB EXIM shipments • 2024

\$2,732

Reported export value • 2024

Market positioning

Emerging niche exporter • primary markets noted: Russia, Nigeria and Zambia • low-volume, high-customization strategy • selected partnerships with large international buyers.

Research Design & Methodology

04

Mixed-method approach combining stakeholder evidence with secondary research

Trade Data & Sustainability Signals

What the available trade data shows—and what it does not prove

8

International export shipments • 2024

\$2,732

Reported export value • 2024

HSN 25251010

Muscovite mica

3

Primary target countries

Russia

Primary target market identified in the report.

Nigeria

Emerging-market destination identified in the report.

Zambia

Emerging-market destination identified in the report.

Analytical caution: the report notes that raw shipment data does not explicitly verify labour conditions, mining sources or environmental offsets. Stronger public sustainability metrics would improve transparency.

CSR & Sustainability Performance

06

Four pillars emerging from the report

01

ETHICAL SOURCING

Supplier audits, traceability records, labour standards and a stated zero-tolerance stance on child labour.

02

ENVIRONMENT

Energy-efficient processing, water recycling, waste controls, dust reduction and green logistics.

03

PEOPLE

Health & safety, PPE, health camps, education, skill development and community infrastructure support.

04

GOVERNANCE

CSR policies, senior oversight, sustainability reporting, external audits and alignment with global norms.

Overall assessment in the report: strong direction of travel, but deeper supply-chain verification and measurable impact evidence remain important.

International Standards & Competitive Advantage

07

CSR as a market-access and risk-management tool

UN Global Compact

Human rights • labour • environment • anti-corruption

UN SDGs

Focus highlighted: SDG 8 • SDG 12 • SDG 13

ILO Guidelines

Decent work, labour rights and occupational safety

- Lower compliance and reputational risk
- Greater buyer confidence through transparent practices
- Potential access to sustainability-sensitive markets
- Differentiation through ethical sourcing and value-added products
- Stronger stakeholder relationships and long-term resilience

RESPONSIBLE PRACTICES

TRUST + CREDIBILITY

MARKET ACCESS + DIFFERENTIATION

Key Challenges & Risk Map

08

Where implementation becomes difficult at scale

Supply-chain complexity

Second- and third-tier suppliers, informal mining and intermediaries reduce visibility.

Technology gap

Remote areas may lack connectivity, electricity and digital literacy for real-time tracking.

Impact measurement

Outputs are easier to count than long-term health, education and environmental outcomes.

Regulatory inconsistency

Enforcement and oversight can vary across decentralized mining regions.

Cost & trade volatility

Price sensitivity, currency moves and geopolitical shocks can pressure sustainability budgets.

Social realities

Poverty, low awareness and livelihood dependence can slow behavioural change.

Management implication: sustainability needs to be treated as a resilience capability—not a discretionary cost.

Recommendations & 12–24 Month Roadmap

Priorities translated into practical action

0–6 MONTHS

FOUNDATION

- Define CSR KPI dashboard
- Map direct + indirect suppliers
- Formalize supplier code & audit cadence
- Create dedicated sustainability budget

6–12 MONTHS

DIGITAL + PEOPLE

- Pilot mobile/blockchain traceability
- Expand worker/community training
- Partner with NGOs & government bodies
- Publish clearer sustainability metrics

12–24 MONTHS

SCALE + DIFFERENTIATE

- Extend traceability across tiers
- Strengthen third-party assurance
- Diversify export markets
- Embed CSR into risk & strategic planning

Target outcome: traceable sourcing • measurable impact • resilient operations • stronger international buyer confidence

Conclusion

10

From responsible intent to measurable, scalable sustainability

CLB EXIM's sustainability journey is strategically relevant to its future in global mica trade.

The report's strongest themes are ethical sourcing, environmental stewardship, employee/community welfare, stakeholder transparency and international CSR alignment. The next leap is stronger traceability, impact measurement and scalable digital systems.

01 TRUST

Responsible sourcing and transparent reporting can strengthen credibility with global buyers.

02 RESILIENCE

Integrating CSR into risk and strategy can reduce exposure to labour, regulatory and reputational risks.

03 MEASUREMENT

Better KPIs and third-party verification can turn sustainability claims into demonstrable performance.
